Subject: Agenda? Topics? ITF in a sec!

Three topics I didn't get to in today's meeting:

1. We met with the Roundtable steering committee, made of 3 caucus leads – business, residents, and fishers (more or less)--recently. The rep for the fisher caucus is a CHA. She asked that ECY provide a Source Control *update*. Mind you, that request was made before the update you gave today. Plus I understand you're planning a source control presentation/event/webinar this spring, which may fill the need. But this may come up in the Roundtable planning (March 31).
2. Kay says that Kelsey was describing the Source Control presentation/event/webinar and noted that you want me to participate (or do something in the realm of outreach?). Curious if that request is for a waterway design update to complement the SC topics, or if I should be starting to discuss the basic "sufficiency" process ECY is using.
3. Anthony, I understand I will be called upon to do a source control sufficiency recommendation on EPA upland cleanup sites. I'd like to explore that more, because even at such sites, Ecology has a role in stormwater pollution prevention, so there's overlap. I should follow the same procedures you're planning to follow, and I know that the procedures are still in development, but can we discuss your thoughts so far? With Rhone Poulenc, Boeing EMF, and Boeing Plant 2 in the upper reach, I need to start coordination with the project managers, and if there's certain information we need to use to demonstrate sufficiency, I need to make sure I'll have it in time.
